

# Chapter 3 - Fluid Statics

## Lecture 5 Section 3.4

### Introduction to Fluid Mechanics

Mechanical Engineering and Materials Science  
University of Pittsburgh

# Student Learning Objectives

Students should be able to determine the:

- ▶ magnitude of a force acting on a submerged planar surface;
- ▶ direction of a force acting on a submerged planar surface;
- ▶ the line of action of a force acting on a submerged planar surface.

## Learning Objectives

### 3.4 Hydrostatic Forces on Submerged Planar Surfaces

# Example #1

- ▶ That tank shown below is 5 [m] wide. The fluid is water at 20°C. Determine the force on  $B$  if the depth is 9.5 [m]

## Learning Objectives

### 3.4 Hydrostatic Forces on Submerged Planar Surfaces

# Example #1

Solution:

Learning Objectives

3.4 Hydrostatic  
Forces on  
Submerged Planar  
Surfaces

# Example #1

Solution:

Learning Objectives

3.4 Hydrostatic  
Forces on  
Submerged Planar  
Surfaces

## Example #2

### Learning Objectives

#### 3.4 Hydrostatic Forces on Submerged Planar Surfaces

- The gate below shown between points  $AB$  has a mass of  $180 \text{ [kg]}$ , is  $1.2 \text{ [m]}$  wide and is hinged at  $A$ . If all fluids exist at  $20^\circ\text{C}$ , for what depth of water  $h$  will the force at point  $B$  be zero?

## Example #2

Solution:

Learning Objectives

3.4 Hydrostatic Forces on Submerged Planar Surfaces

## Example #2

Solution:

Learning Objectives

3.4 Hydrostatic Forces on Submerged Planar Surfaces

## Example #2

Solution:

Learning Objectives

3.4 Hydrostatic Forces on Submerged Planar Surfaces
